

# Internal Medicine

All IndyVet specialists have received four or more years of post-doctorate training prior to board certification. This training and experience allows our specialists to manage and treat a wide variety of complex diseases and conditions in collaboration with general practitioner colleagues across the state of Indiana. This collaborative approach to case management allows us to provide the most versatile care available.

The establishment of IndyVet Internal Medicine as a separate clinical department occurred in 2011 in order to deliver better and more efficient care to patients. The goal of internal medicine at IndyVet is to provide compassionate and comprehensive care to our patients, their families, and to referring veterinarians. Each doctor in the internal medicine department has worked in the general practice sector and understands the supportive and collegial relationship desired by practitioners. Our objective is to retain patients only as long as required to identify and resolve the initial crisis, and to then work in conjunction with, or through the referring veterinarian on follow up care.
